

Anti-HSA Polyclonal Antibody

Product Name :	Goat Anti-HSA Polyclonal Antibody
Cat No. :	Pab0076-G
Synonyms of Antigen:	Albumin, Human serum albumin
Character:	Liquid
Application :	Immunoturbidimetry, Nephelometry, ELISA and Immunochromatography
Purity:	Antigen Affinity Purification
Buffer:	0.15M PBS, pH 7.5, 0.02% Azide
Storage:	4°C for 6 months
Background:	Serum albumin is produced by the liver, occurs dissolved in blood plasma and is the most abundant blood protein in mammals. Albumin is essential for maintaining the oncotic pressure needed for proper distribution of body fluids between blood vessels and body tissues. Abnormal serum albumin levels indicates dysfunction of kidneys or liver. This antibody is antigen affinity purified by human serum albumin, with much higher sensitivity than antiserum or IgG fraction, making it a necessary component for quantitative detection reagents of trace albumin in samples.
