Western Blotting of HA-Tag fused recombinant protein with Anti-HA Rabbit Polyclonal antibody at dilution of 1:1000

Background:

The HA tag is derived from the HA-molecule corresponding to amino acids 98-106. It has been extensively used as a general epitope tag in expression vectors. Many recombinant proteins have been engineered to express the HA tag, which does not appear to interfere with the bioactivity or the biodistribution of the recombinant protein.

We focus on precise protein quantification
